

Omand Park Bridge
Active Transportation Infrastructure Stimulus Project

Survey Results

On March 18, 2010, a Community Meeting and Open House was held to receive input regarding the proposed Omand Park Bridge. Five options were presented including three variations of a bridge, one park upgrade option, and one option to upgrade the existing bridge. Respondents were asked to rank their preference for each of the five options. The results indicated that:

- 38% of respondents ranked "Option D - parks upgrades" as their first choice
- 23% of respondents identified "Option A - bridge closest to the river" as their first choice
- 15% identified Option E - upgrade the existing bridge" as their first choice
- 15 % indicated that none of the options were acceptable
- The balance of the responses were split among the Option B and C bridges (4%), and respondents who marked multiple options as their first choice (5%)

During the open house event, comments were also recorded by participants on flipcharts beside each of the proposed options. These comments have been transcribed and are provided here as part of the public record.

Flipchart notes were also recorded during the community meeting portion of the event and are also provided here for reference. Please note that some of the flipchart comments lose some of their context as they were recorded as key points of a larger presentation.
